

AITreatment™

Medical records are the heart of Animal Intelligence (AI)™. And, AITreatment™ is just one more way that AI offers TRUE electronic medical records (EMR) that are integrated into all areas of your practice. The AITreatment Module brings the concept of the white board to a digital level. The AITreatment Module consists of both Treatment and Order sheets all in one!

By using AITreatment, complete orders and full treatment data are automatically entered into the patient's medical records – no hyperlinks are involved. There is NO more double entry. No missed treatment entries or missed charges. Billable treatments are added automatically to invoices. And, entries are viewed real time by others so patient care is seamless throughout the hospital. This is just another example of SMART records from Animal Intelligence Software, Inc. (AIS).

The AITreatment Module allows the doctor to create orders both from customized templates and “on the fly”. All orders and treatments are viewed in real time by all staff from any workstation running AI. The time that each treatment is due is clearly visible to assure treatments are not missed.

The screenshot displays the 'Operations Center' window for a patient on 09/20/2007. It features a menu bar (Activity, Lookup, Client, Patient, Veterinarian, Hospital, Record, Lab/Line, Estimate, Invoice, Treatment) and a sub-menu (Orders, FlowSheet, AITreatment). The main area is divided into 'Current Patient (PS)' and a grid of 'Orders' and 'Events'.

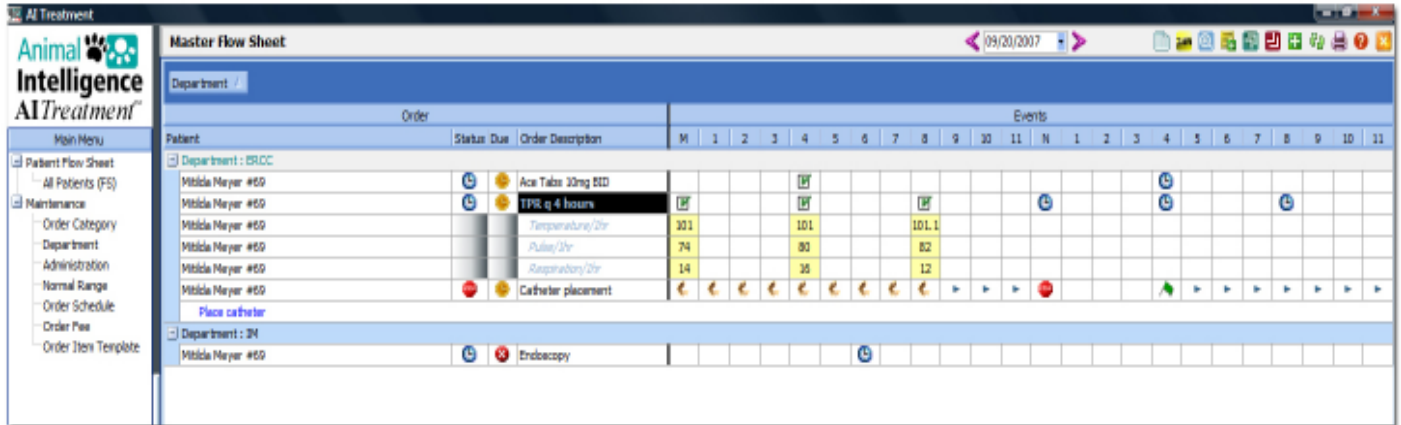

Order				Events																							
Department	Status	Due	Order Description	M	1	2	3	4	5	6	7	8	9	10	11	M	1	2	3	4	5	6	7	8	9	10	11
ERCC	🟢		Ace Tabs 10mg BID

At the bottom, patient information is displayed: Meyer, Donna; Mitilda (Persian / female spayed); 69; Hunt, Robert; AIS.

Benefits & Features

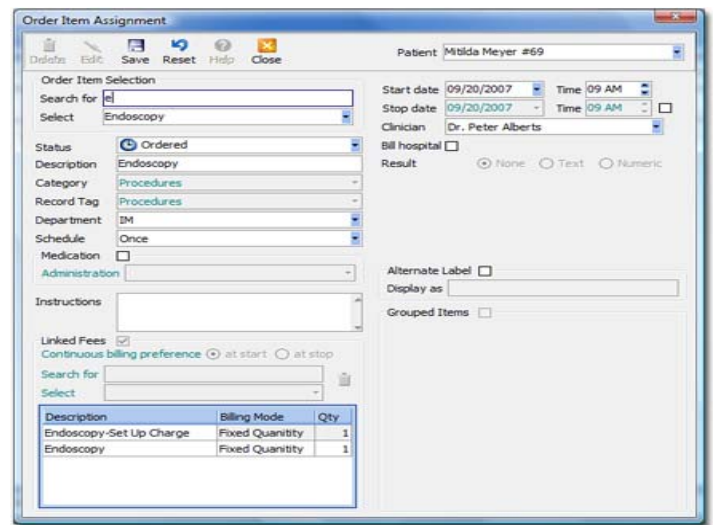

For the Doctor:

Doctors can create new orders either from a customized list or develop new orders on the fly. Orders are comprehensive – giving periodicity, special instructions, etc. The confusion of handwritten orders is eliminated to ensure order and treatment accuracy. Each doctor can have his or her own orders, tailored to how he or she practices. All patient orders can be viewed for a 24-hour period in 60-minute increments thus increasing patient treatment synergy between shifts.

For the Technician:

Technicians can see all orders needed by location at every AI workstation. The easy-to-view format assures that technicians can see all treatments at a glance. When a technician completes a treatment, the results are entered automatically in the patient's TRUE electronic medical record. *AITreatment™* eliminates double entry and missed charges and assures coordination among staff on treatments. When a treatment is completed, it is marked as completed, results are entered in the records and placed on the Flow Sheet for quick viewing, and billable items are placed on the invoice. The *AITreatment* sheet can be printed, if needed.

For the Hospital:

The *AITreatment™* Module increases practice profits. Missed charges are significantly reduced, time is saved by the elimination of double entry, communication among medical staff is improved, and medical care is integrated across the practice over time. If desired, it can be projected onto a white board for traditional viewing. Orders can also be assigned to various departments or areas, allowing those areas or departments to filter out other areas and see only their respective orders.
